The Board initiated the Draft Addendum in response to stock projections indicating a low probability of meeting the 2029 stock rebuilding deadline. The most recent stock projections estimate an increase in fishing mortality in 2025 due to the above average 2018 year-class entering the current recreational ocean slot limit. There is also concern about the lack of strong year-classes behind the 2018 year-class.

This proposed action is intended to increase the probability of rebuilding the stock by reducing fishery removals by 12% with management measures implemented in 2026. For the commercial fishery, the Draft Addendum proposes a commercial quota reduction. For the recreational fishery, the Draft Addendum considers season closures and/or size limit changes. For Maryland's Chesapeake Bay recreational fishery, the Draft Addendum also proposes changing the recreational baseline season to simplify Maryland's Chesapeake Bay regulations, which could improve compliance and enforcement, and to re-align fishing access based on stakeholder input and release mortality rates.

For commercial tagging, the FMP currently allows states to choose whether to tag commercially harvested fish at the point of harvest or point of sale. To address concerns that waiting to tag harvested fish until the point of sale could increase the risk of illegal harvest, the Draft Addendum considers commercial tagging at the point of harvest or by the first point of landing intended to improve enforcement and compliance.

There is also concern that inconsistent methods of measuring the total length of striped bass for compliance with size limits undermines the intended conservation, consistency, and enforceability of the coastwide size limits. To address this, the Draft Addendum considers a coastwide definition of total length for both sectors.
